Kozimjon Vaxobov

Senior Frontend Engineer — Angular & TypeScript

Email: kazimvakhobov@gmail.com | Phone: +998 94 309-30-49 | Telegram: t.me/kazimvakhobov
Location: Kokand, Uzbekistan (UTC+5) — 3–4 hours ahead of Central Europe, with substantial daily overlap with European working hours.
Availability: Full-time, remote, available immediately. Open to long-term engagements.
English: B2 (Upper-Intermediate) — four years of daily work in English with an international team.

PROFESSIONAL SUMMARY

Senior frontend engineer with 8 years and 3 months of commercial experience, the last 4 years as a hands-on team lead who still writes production code every day. Core stack is Angular with TypeScript and RxJS, used continuously across every role since 2018; ReactJS and React Native as a second stack, and Node.js with NestJS on the backend side.

Track record in B2B platforms and self-service portals: partner dashboards, administrative panels, data marketplaces and integrations with external systems, delivered for government and enterprise clients in Malaysia and for SaaS products across the CIS region. Four years based in Malaysia with a Malaysian company, including client-facing solution consulting in English.

Since 2025 has run an AI-first engineering process end to end, shipping production systems built with agentic development tooling while keeping code review, manual testing and architectural standards mandatory.

CORE STACK AND YEARS OF EXPERIENCE

Angular (versions 2 through 17) — 8 years
TypeScript — 8 years
RxJS — 8 years
JavaScript (ES6+), HTML5, CSS3, SCSS — 8 years
ReactJS and Redux — 4 years
PostgreSQL — 4 years
Node.js and NestJS — 3 years
React Native (iOS and Android) — 1 year
Git — 8 years

ADDITIONAL TECHNOLOGIES

Angular Material, AntDesign, Bootstrap, Astro, REST API design, WebSocket, Socket.IO, microservices, SOLID and OOP, MongoDB, Redis, Docker, Nginx, PM2, Apache Tomcat, Java and Spring Boot, Unix and Linux, Android development with Kotlin and Java.

AI-FIRST ENGINEERING PRACTICE

A working method rather than a list of tools. It is what allowed a four-application platform to reach production in four months.

- Two production systems delivered through agentic development tooling (Claude Code): an end-to-end freight logistics platform covering web, admin and mobile, and a Data Lake reporting microservice. Both live in production, not proofs of concept.
- Designed a parallel multi-agent development workflow that uses Git Submodules as a shared documentation layer, giving every agent and every engineer a single consistent context space. This solved the problem of parallel agents drifting apart on architectural decisions.
- Specification-driven delivery: every task starts from a written spec with explicit acceptance criteria and boundaries, and finishes with automated verification.
- Adoption with guardrails: mandatory code review, manual testing and SOLID compliance on every AI-assisted change. Mentored the team on working this way.

PROFESSIONAL EXPERIENCE

Datamicron SDN BHD — Malaysia (relocated). July 2022 to August 2026 (4 years 2 months). Primary employment.

Solution Consultant, then Solution Architect and Frontend Team Lead

Owned the frontend track across system integration and BigData programmes for Malaysian government and enterprise clients. Grew from consultant to solution architect and development team lead. Worked directly with clients in English on requirements and technical documentation.

- **SSM Data Marketplace** (Ministry of Domestic Trade, Malaysia) — an online marketplace for statistical data giving individuals and companies access to BigData through complex filtering at the Data Lake and Data Warehouse level. Designed and implemented the frontend architecture in ReactJS and TypeScript, and was the only backend developer on the project: Java Spring Boot service and Postgres schema designed from an empty repository. Non-standard build: bundles embedded into Apache Wicket and served from a single Tomcat instance alongside Spring Boot, with no separate Node.js runtime in production.
- **JPJ AwAS** (Malaysian Road Transport Department) — automated penalty reporting from road cameras, integrated with a traffic violation recognition system. Frontend built in Angular and TypeScript on top of Java Spring Boot.
- **Report Service** — a standalone NestJS microservice abstracting Data Lake and Data Warehouse access: SQL assembled on the fly from client-side filters, source configurations stored as JSON, Redis caching. Designed, built and tested end to end.
- Contributed to system architecture design, technical documentation, requirement alignment with clients and task distribution across the development team.

Yuk Markaz 24 — Uzbekistan. January 2026 to April 2026. Project engagement alongside primary role.

Development Team Lead

Delivered an end-to-end freight logistics platform for the CIS market: an administrative panel, a web workspace for logistics operators and dispatchers, a driver mobile application and a landing page.

- Administrative panel built in Angular 17; dispatcher workspace in ReactJS with TypeScript; driver application in React Native for iOS and Android; landing page in Astro; backend in NestJS with PostgreSQL.
- Responsible for client-side architecture, business logic design and task distribution across the team.
- Outcome: platform live in production, mobile applications submitted for App Store and Google Play review.

Smartbooking uz — Uzbekistan. June 2022 to December 2025. Part-time alongside primary role.

Team Lead and Frontend Developer

Single-window management system for hotels and hotel chains, covering bookings, reporting and dynamic pricing.

- Core product capability was two-way integration with distribution channels: Booking.com, Agoda, Airbnb, Mybooking.uz and others.
- Hands-on development in Angular 9 and above with TypeScript, client-side architecture decisions, code review and onboarding of new developers. Backend team worked in PHP.

MatrixSolutions — Tashkent, Uzbekistan. June 2018 to June 2022 (4 years 1 month).

Developer, then Team Lead

Web and mobile interface development in Angular 2 and above with TypeScript. Progressed from developer to team lead across several commercial projects.

- **E-Cinema** — a three-product suite (E-Ticket, E-Kino, Kinoprokat) for cinema distribution management, electronic ticket sales and reporting automation. Role: project manager and frontend developer in Angular.
- **Falcon Messenger** — a corporate messenger. Role: Android team lead and hands-on development in Kotlin, with AES and RSA encryption and Socket.IO.

EDUCATION

Tashkent University of Information Technologies (TUIT) — Bachelor's degree, Software Engineering, 2018.

LANGUAGES

Uzbek — native. Russian — C2. English — B2 (Upper-Intermediate).
